

A scatter plot on a white background with a black border. It contains a large, dense, horizontally-oriented cluster of blue circular data points. A single red circular data point is located near the top center of this main cluster, slightly to the left of the vertical center. There are several smaller, less dense groups of blue points scattered around the main cluster, including a small group at the top right, a few points at the top left, and some points at the bottom and right edges.
